Profile

I'm Chanidu Senarathna, a 19-year-old with a background in Data Science and Software Engineering.

I've studied Computer Science for over 3 years, building skills in analytics, visualization, and product metrics.

Though I have no formal work experience yet, I've actively developed projects and self-learned industry tools.

Alongside tech, I'm deeply interested in business and aspire to be an entrepreneur.

I've self-studied key areas of real estate: residential, commercial, land, industrial, and hospitality.

I understand how properties gain value through location, demand, and development.

Familiar with real estate terms like ROI, capital gains, mortgage, lease, and valuation.

My goal is to apply data-driven insights to real estate and build impactful ventures.

Skills

● Real Estate Knowledge:

- Property Types: Residential, Commercial, Industrial, Land, Hospitality
